

Welcome To The Future Of Claims Assessment

i-Detect®

The i-Detect® System has been developed by i-Cog to rapidly detect risk triggers and fraud at both underwriting and claim levels.

Claims Management Solutions

Without leaving a footprint, all claims, not just those of concern, can be cleansed for risk triggers against Insurer's exact and tailored criteria. These customised 'rules' ensure all outcomes are bespoke to the client and aligned to their own environment, processes and risk tolerance.

Claims that are flagged after initial system inspection are passed to an intelligence researcher for assessment against the Insurer's set policy and claims criteria. Within 48 hours your claims handlers will be presented with a detailed, yet simple, risk trigger report outlining findings, detected anomalies and evidenced recommendations.

⚙️ Benefits

✓ Average claim saving of £54,000 (all lines)

✓ Accurately identifies policy and claim risk that would otherwise have been missed

✓ Low-cost with fixed pricing to ensure total transparency

✓ Speed of return

✓ Depth of reporting with a before unseen thoroughness

✓ No footprints

✓ System and human interaction

✓ Best system sources available on the market

✓ Gives claims handlers the live evidence to challenge suspicious claims

✓ Accelerates genuine claims back to the insurer for action

✓ Claim does not need to be a concern before washing through i-Detect®

✓ System can be used at policy inception, FNOL or after claim notification

✓ Acts as a perfect platform for the sister i-Option® methods of revolutionary claim validation

📷 A Snapshot

The system is not prejudiced to any claim type – all policyholders and all claims can be cleansed for risk against exact criteria for each insurer.

During a recent pilot study, 301 household and travel claims from 4 Insurers were subject to i-Detect®. All of these claims were historical and had recently been settled by the Insurers directly. The system output resulted in the following:

Recommended Decline = 65
(Total saving would have totalled = £75,473)
Concerns Present = 137
Proceed to Settlement = 99

Users of the i-Detect® System are currently placed in the most competitive position within the market when it comes to identifying concerns, understanding their customers and accurately identifying who they are taking on as an insurable risk.

Interested In Learning More? i-Cog would be delighted to offer interested clients a proof of concept for i-Detect® to wash an historic claims sample to demonstrate the potential savings that could have been generated.
